EXAMINER'S AMENDMENT

Election/Restriction

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-6, drawn to an apparatus for producing ammonia, classified in class 422, subclass 148.
 - II. Claims 7-12, drawn to a method for producing ammonia, classified in class 423, subclass 359.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions II and I are related as process and apparatus for its practice. The inventions are distinct if it can be shown that either: (1) the process as claimed can be practiced by another materially different apparatus or by hand, or (2) the apparatus as claimed can be used to practice another and materially different process. (MPEP § 806.05(e)). In this case the process as claimed can be practiced by another materially different apparatus, such as one which does not include a hydrogen permeable structure.
3. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.
4. During a telephone conversation between Examiner Wayne Langel and Attorney Brian Steinberger on August 16, 2005 a provisional election was made with traverse to prosecute the invention of Group I, claims 1-6. Claims 7-12 are withdrawn from further

consideration by the examiner, 37 CFR 1.142(b), as being drawn to a non-elected invention.

Examiner's Amendment

5. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Brian Steinberg on September 14, 2005.

The application has been amended as follows:

Claims 7-12 have been cancelled.

6. The following is an examiner's statement of reasons for allowance: The prior art neither teaches nor suggests an ammonia production apparatus which comprises a lower cavity, having a gaseous hydrocarbon supply means, air supply means, and an oxidation structure, separated from an upper cavity by a hydrogen permeable structure and a means for transferring nitrogen from the lower cavity to the upper cavity for catalytic conversion to ammonia.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
